

BC - Locating bearing, blind shaft

LC - Non-locating bearing, blind shaft

BP - Locating bearing, passing shaft

LP - Non-locating bearing, passing shaft

- See page 08 for technical features.
- Standard seal "ASR" - "taconite" labyrinth seal with retainer, see page 06 (reference). For seal types ASZF, AS, R, ZF, TC and GS the dimensions are maintained. **Should a different type of seal be requested, the dimensions of the columns "L", "N" and "M" on the table can be modified**, but our engineering department should be consulted for more information.
- These housings are standardized with four holes on their base, but up to size 20 they can be supplied with two holes on the base by simply adding the suffix "D" to the housing's reference (Ex. HSBPD-15-BP-ASZF). The bolt dimensions for housings with two holes on the base are located in the column "S", in brackets.
- They can seat split bearings, however, the designation must be changed by adding the prefix B. For application of other bearing series, please consult our Engineering Department.
- Up to size 56 (inclusively) the bearing's axial movement is blocked by locating rings, for bigger sizes the bearing's axial movement is blocked by the lateral lids.
- **Specification example:** HSBP-157-BP-ASZF = HSBP housing, size 157, made of gray cast iron, with four holes on the base, appropriate for seating 22215-K bearing + HA-315 adapter sleeve, for locating bearing and passing shaft, with taconite seal composed of AS axial labyrinth and ZF retainer.
